Green School- Where Every Small Action Grows into a Greener Tomorrow.

January,2026

EDUCATION THAT INSPIRES CONFIDENCE

Green School

Green School– Growing Greener Together

January has been a month of purpose, participation, and powerful learning at our Green School. This edition of the newsletter brings together moments that reflect our shared commitment to sustainability, awareness, and responsible citizenship.

From meaningful Class Assemblies echoing environmental consciousness to refreshing Nature Walks where classrooms shifted under open skies, our students experienced learning beyond textbooks. Green Day and Earth Day celebrations strengthened our promise to protect the planet through thoughtful action.

The Solar Ambassador Workshop sparked innovation as students explored renewable energy solutions and understood the power of the sun in building a sustainable tomorrow. Our educational excursion to the Aravalli Range deepened ecological understanding, turning observation into appreciation.

Aligned with the vision of the United Nations Sustainable Development Goals, initiatives like Car Free Day encouraged mindful living and collective responsibility.

This session, we didn't just talk about change - we practiced it. Because in a Green School, every step forward is a step toward a cleaner, brighter, and more sustainable future.

School Nursery

Nature Walk

A nature walk is an essential learning experience in a Green School, where nature itself becomes the classroom. Students step outside to observe trees, plants, birds, and insects, developing a deeper appreciation for biodiversity. They learn to understand the delicate balance that sustains life.

This activity strengthened observation skills and built an emotional connection with the environment. Students realize the importance of protecting natural resources and preserving ecosystems.

Nature walks encourage mindfulness and respect for the Earth. They remind students that protecting nature is not just a lesson but a responsibility.

Such experiences help Green School learners grow into environmentally conscious individuals who value and protect the world around them.

Every nature walk is a lesson in gratitude

Nature Walk

Green schools don't just teach nature; they live it

Earth Day

Earth Day holds special significance in a Green School, as it reflects the school's commitment to environmental stewardship. Students engage in activities such as cleanliness drives, tree plantation, and awareness programs to protect natural resources.

Earth Day empowers students to become protectors of the planet. It strengthens their commitment to sustainable living and reminds them that every action—no matter how small—contributes to a greener and safer future.

It also nurtures a deeper emotional connection between students and nature, transforming awareness into lifelong values. Through collective participation, students realize that real change begins with individual responsibility. Earth Day becomes more than a celebration—it becomes a promise to care, conserve, and coexist. It inspires young minds to lead with compassion, act with responsibility, and shape a future where progress and nature walk hand in hand.

Protecting Earth is the most important lesson we will ever learn.

Earth Day

Care for Earth is care for ourselves

Green Day

Green Day is a vibrant celebration of the core values of a Green School—sustainability, awareness, and responsibility. Students participate in activities such as tree plantation, eco-friendly craft making, and awareness campaigns. The day reinforces the importance of protecting nature through meaningful action.

By wearing green and engaging in environmental activities, students symbolize growth, harmony, and renewal. Green Day strengthens the school's mission of nurturing environmentally responsible citizens. It inspires students to adopt green habits and understand their role in creating a cleaner, healthier planet.

Solar Ambassador Workshop

The Solar Ambassador Workshop is an important initiative in a Green School that promotes awareness about renewable energy. Students learn how solar energy works and understand its role in reducing dependence on non-renewable resources.

Through hands-on activities, such as assembling solar devices, students experience the power of clean energy. This practical exposure inspires them to adopt sustainable energy solutions.

The workshop nurtures innovation and responsibility. It encourages students to become ambassadors of change who promote eco-friendly practices. It reflects the Green School's vision of preparing students to lead the transition toward a sustainable and energy-efficient future.

Harnessing sunlight is empowering the future

Class Assemblies

The class assembly in a Green School is not just a daily gathering; it is a platform where awareness meets action. Each assembly reflects the school's commitment to sustainability and responsible living. Students share thoughts on environmental protection, present eco-themed skits, and speak about simple practices like saving water and reducing waste.

It builds confidence while nurturing environmental consciousness. Students learn that leadership is not only about speaking but also about setting an example through eco-friendly habits. The assembly becomes a space where young minds inspire each other to care for the planet.

Such assemblies shape responsible individuals who understand that change begins with awareness. In a Green School, every assembly becomes a small step toward building a greener mindset and a more sustainable future.

Class Assembly-Earth Day

Every assembly is a reminder that young minds can heal the Earth

Class Assembly-
World Conservation Day

Assembly is where a green vision becomes a shared mission

Educational Excursion

The educational excursion to the Aravalli Range provided Green School students with a valuable opportunity to connect with nature. They explored the natural environment, observed plant and animal life, and learned about ecological balance.

This experience helped students understand the importance of conserving forests and protecting biodiversity. It transformed theoretical knowledge into real-life understanding.

Such excursions strengthen environmental awareness and responsibility. They inspire students to respect nature and become active participants in conservation efforts, reflecting the true spirit of a Green School.

Water Testing

Clean water is not a privilege — it is a promise to the future.

Blue Bells Model School proudly steps forward as an active participant in the 5-city pollution measurement initiative powered by Nitya Ensafe and executed by Rootskills. This significant study spans across Pune, Nagpur, Gurgaon, Noida, and Mumbai, focusing on assessing urban water quality through scientific and data-driven analysis.

As a conscious institution, the school has submitted its water sample to contribute to this critical research. The initiative undertakes comprehensive testing of water from key urban establishments — schools, hospitals, IT parks, and high-rise buildings — generating meaningful insights that will guide sustainable water management solutions.

Water sustains life, shapes communities, and defines public health. By participating in this initiative, Blue Bells Model School reaffirms its belief that responsibility begins with awareness — and awareness begins with action.

Aligned with the Sustainable Development Goals established by the United Nations, the school remains committed to measurable environmental stewardship and informed sustainability practices.

This effort is more than scientific participation — it is a statement of values. It reflects a vision where education does not stop at textbooks but flows into real-world responsibility. Every drop tested is a step toward transparency. Every action taken is a step toward accountability.

The school believes that protecting water today is protecting life tomorrow. When institutions rise with awareness, communities rise with hope. When young minds witness responsibility in action, they grow into guardians of the planet.

Because the future will not ask what we knew — it will ask what we chose to protect.

Water Testing

Reducing Carbon Footprints

"The Earth is not something we inherit; it is something we protect through our choices."

Reducing the carbon footprint in schools is not just an environmental responsibility-it is a promise to the future. At Blue Bells Model School, conscious and meaningful steps have been taken to create a greener, cleaner, and more sustainable campus while nurturing environmentally responsible citizens.

Energy-efficient lighting: Traditional incandescent bulbs have been replaced with energy-efficient LED lights. These consume significantly less electricity and last longer, reducing both energy consumption and maintenance needs.

Solar panels: Solar panels have been installed on school rooftops to harness clean and renewable energy. This initiative has reduced dependence on fossil fuels and contributed to lowering the school's overall carbon emissions.

Energy-efficient appliances and equipment: The school has upgraded to energy-efficient appliances such as computers, printers, refrigerators, and HVAC systems. Preference is given to certified energy-saving equipment that minimizes electricity usage.

HVAC system optimization: Regular maintenance of heating, ventilation, and air conditioning systems ensures efficient performance. Students and staff are also encouraged to switch off lights and use energy responsibly when spaces are not in use.

Waste reduction and recycling programs: A structured recycling system has been implemented for paper, plastic, glass, and other materials. Awareness programs help students understand the importance of reducing waste and adopting sustainable habits.

Composting initiatives: Organic waste from the school is composted, reducing landfill burden and methane emissions. The compost produced is used for gardening and landscaping, completing a natural cycle of sustainability.

Through these thoughtful actions, the school is not only reducing its carbon footprint but also planting seeds of awareness, responsibility, and hope. Every small step taken today becomes a powerful legacy for tomorrow.

Reducing Carbon Footprints

Leave softer steps upon the land,
Let care, not carbon, guide your hand.
Choose green today, let Earth renew,
The future breathes because of you.

SDGs

The Sustainable Development Goals (SDGs), introduced by the United Nations, align closely with the mission of a Green School. These goals promote environmental protection, responsible consumption, and sustainable living.

Students learn to conserve resources, reduce waste, and respect nature. They understand that their actions contribute to global well-being.

By integrating SDGs into education, the Green School prepares students to become responsible global citizens. It empowers them to create solutions and work toward a sustainable, peaceful, and environmentally balanced future.

Clean energy is the bridge between today's progress and tomorrow's survival.

Plantation Drive

Plantation Drive: Growing Hope, One Sapling at a Time

A plantation drive is not just an activity — it is a quiet revolution of hope.

With eager hands and mindful hearts, students and staff came together to plant saplings across the campus, turning open spaces into living symbols of care and responsibility. Each sapling planted is a step toward cleaner air, cooler surroundings, and a healthier ecosystem. It reminds us that real change begins with small, consistent actions.

This initiative nurtures more than plants — it nurtures awareness, ownership, and a lifelong respect for nature. Students learn that they are not just observers of the environment, but its protectors and future guardians.

The plantation drive also reflects the spirit of the Sustainable Development Goals championed by the United Nations, encouraging climate action and sustainable living at the grassroots level.

Every planted tree is a silent promise of —

- **shade for tomorrow**
- **life for generations**

Plantation Drive

When we plant trees, we don't just grow greenery — We grow the future.

Project Wrinkles Achhe Hain No Iron Day

“Perfection isn’t always polished. Sometimes, it’s proudly wrinkled.”

In a thoughtful step towards sustainability, Blue Bells Model School introduced Project Wrinkles Achhe Hain (No Iron Day) to promote energy conservation and mindful living. The initiative encourages students and staff to avoid ironing their uniforms on a designated day, thereby reducing electricity consumption and lowering the school community’s carbon footprint.

Project Wrinkles Achhe Hain beautifully blends awareness with action, reminding everyone that sustainability is not about being flawless—it’s about being thoughtful.

Saving energy today is shaping a greener tomorrow

Project Tokri 2.0

Project Tokri 2.0: From Silent Service to Skilled Strength

Transformation begins when opportunity meets belief.

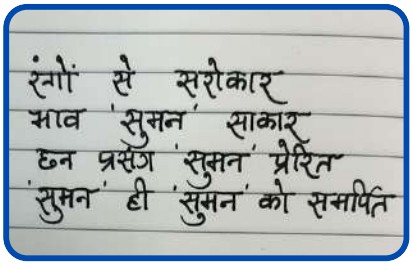
Project Tokri 2.0 at Blue Bells Model School stands as a living example of empowerment through innovation. Guided by the school's Innovation Team, this initiative goes beyond mentoring students—it extends its heart to upskilling the support staff, turning everyday contributors into confident creators.

Building on the success of Tokri Part-1, the project has evolved into a meaningful model of micro-entrepreneurship and sustainable living. The team has created chemical-free soap bars using aloe vera, saffron, virgin coconut oil, and medicinal herbs—each bar reflecting purity, tradition, and conscious craftsmanship. These are not just products; they are symbols of self-reliance and mindful innovation.

At the core of Tokri 2.0 lies its most powerful force—people. Those who once worked quietly behind the scenes now stand proudly as skilled co-creators. This journey is more than skill development; it is about restoring dignity, building confidence, and unlocking potential that was always there, waiting to be seen.

Project Tokri 2.0 is not just an initiative.
It is a shift from dependence to dignity.
From participation to ownership.
From helping hands to empowered creators.

Project Tokri 2.0



True innovation does not just create products — it creates people.

EDUCATION THAT INSPIRES CONFIDENCE

Project BYB

The Bring Your Box Campaign is an eco-friendly initiative that encouraged students and the staff to carry their own reusable while going to the canteen. The goal is to reduce single-use plastic and packaging waste, promote sustainable habits, and support a cleaner environment.

By bringing your own box, or container, you help cut down on plastic pollution, lower carbon footprints, and inspire others to adopt responsible consumption practices. Small individual actions, when multiplied across communities, create a significant positive impact on the planet.

The campaign promotes awareness, responsibility, and long-term environmental sustainability—because every reusable choice counts.

BYB: Because Earth deserves better

Car Free Day

Car Free Day is an important initiative in a Green School that promotes eco-friendly transportation. Students and teachers choose to walk, cycle, or use sustainable transport to reduce air pollution.

This activity raises awareness about the harmful effects of excessive vehicle use and encourages healthier lifestyle choices. It also reinforces the importance of reducing carbon footprints and reflects the Green School's commitment to protecting the environment and building a cleaner, greener, and healthier future for all.

Beyond reducing emissions, this initiative helps students experience the joy of simple, mindful living. The absence of traffic noise allows everyone to reconnect with their surroundings and appreciate the beauty of a cleaner environment. It encourages a sense of shared responsibility and shows that collective effort can lead to meaningful change.

Car Free Day also builds discipline, awareness, and respect for natural resources. It empowers students to become role models in their communities, spreading the message of sustainability beyond the school. Through such conscious actions, the Green School nurtures environmentally responsible citizens who understand that protecting the planet begins with everyday choices.

Message
Editorial Team

As we close this edition, we invite every reader to pause and reflect. Sustainability is not a destination — it is a daily decision. It lives in the choices we make, the habits we build, and the responsibility we carry forward.

This newsletter is not just a record of events; it is a reminder of what is possible when awareness meets action. The seeds planted today — in thought, in soil, and in spirit — will shape the world of tomorrow.

Let us continue to walk gently on the Earth, think consciously, and act courageously.

Because future is not something we wait for.It is something we build — together.

Until next time, keep striving, keep learning, and keep growing!

Warm Regards
Ms. Payal Uppal, Chief Architect
